### Supporting you through the full life cycle of your electronic products

M2S Electronics offers you an extensive range of services to support you through the full life cycle of your electronic products.

Many of the electronic parts that compose a product have a life cycle that is significantly shorter than the life cycle of the product. Obsolescence of electronic parts is a major contributor to the life cycle cost of systems.

At M2S, one of our supply chain aims is to significantly reduce design iterations, inventory expenses, sustainment costs, and overall life cycle product costs.

On that purpose, many approaches are addressed such as last time buys (buying and storing enough parts to meet the system's forecasted lifetime requirements or requirements until a redesign is possible), or the predictive or proactive approach that is to deal with the constantly monitoring and predicting the life cycle of all the components used in the product well in advance as well as developing alternate plans in advance.

Thus, effective life cycle management is an influential strategy to minimize product costs, promises best possible supply and evades opportunity losses. The early identification of obsolescence shock reduces overall product cost thereby proper and profitable decisions can be taken.

#### About M2S Electronics

Founded in 1981, M2S Electronics is a global leader in the design and assembly of electromechanical & electronic integrated systems. Our Savoir Faire, particularly in Transport, Energy, HVAC, Automotive and Medical industries, allows to provide our customers services based on two important words: Partnership and Value-added.

The satisfaction of our customers and the implementation of our Customer Experience program are part of everyday life.

You will find news and information at [m2selectronics.com](http://m2selectronics.com) or by following us on Twitter @M2S\_Medias.
